The battery test chamber is capable of conducting battery tests of all EUCAR hazard levels?0-7?. In order to ensure the safety of battery testing, LIB adds an explosion-proof system and a spray system

Do you want to save space in the laboratory to put more experimental instruments? Neware Coin Cells Battery Tester and Temperature Chamber Integrated Machine will be your best choice.

With a foot print as small as 360mm*450mm, Neware mini chamber is perfect for small batch battery tests in the research and development labs. The mini constant climate chamber provides a steady

These tests push the battery to the edge of its safe temperature range and involve higher charging and discharging currents. This package provides a comprehensive view of how a battery performs under

Stable temperature control for routine battery performance and lifecycle testing. Engineered for standard battery R& D and quality assurance (QA/QC) workflows ? ensures consistent, highly repeatable

Support tests for various standards for small sized batteries. Equipped with safety functions that protect against fire and bursting of the battery, including a door lock, pressure relief vent, forced exhaust and

Designed to simulate a range of temperatures, it facilitates thorough assessment of battery performance, ensuring safety and longevity. This chamber is indispensable for manufacturers, researchers, and

The double-layer high and low temperature chamber is used as a high and low temperature testing device for power battery samples. It is currently mainly used in the new energy battery industry.

Battery cabinet temperature test device

Battery Temperature Chamber is suitable for high and low temperature adaptability test of batteries, electronic and electrical products, electrical appliances, instruments, plastics, pvc and other raw

Neware Constant Temperature Test Chamber aims to test battery performance under constant temperature by simulating room temperature condition. it can analyze and evaluate whether the
